#### ABSTRACT

The present study examined functions and performances of students in strengthening environmental education and environment awareness correlation has been found between the achievement of the students in environmental education and awareness. Environmental education is very important for self-fulfillment and social development. The environmental education is needed for the protection and preservation of environmental education is in order to maintain the quality of life. The role of students should go a long way in strengthening the environmental education for society. Normative survey method was used for this study. A sample of 100 students was drawn from XIth standard of four different schools of Fatehpur Block of Distt. Kangra. questionnaire was used to collect the data from students and an environment awareness ability test was used to find out the performance of students. Coefficient of correlation “r” was used to find out the relationship between achievement in environmental education and environmental awareness ability. The study indicates that the students are not performing to solve the problem of pulsation explosion, exahaustiom of natural resources, and pollution the environment. As a result, students are not having enough awareness and skills for identifying and solving environment problems. No significant positive relationship was found between achievement in environment education and environment awareness ability. The out door project, the orientation programme is to be give environment to students to enrich and strengthen the environmental education. Project and out of class activities should also be given to students to increase performance of students.
